

Alpha Beta Proportional Counting System

Standard Features include:

- Heavily shielded gas flow detectors with active cosmic guard for backgrounds <1.3 cpm (2-1/4" detector).
- User selection of reported activity units from DPM, pC, uC, or Bq per unit of sample.
- MCA based separation of α and β pulses in simultaneous mode, dual count voltage discrimination mode also standard.
- Standard PC controller for reliability, serviceability, and easy updates.
- User defined Sample "Types" specify counting protocols.
- Menu driven system operation with on line help for ease of use.
- Random access sample cartridges make for easy loading and unloading.
- Automatic archiving of raw data to a disk file for easy QA.
- Automatic plateau generation, Automatic x testing, Gamma option (2x2 NaI) available on single detector systems.
- Available with 1, 2, or 5 inch detectors.
